This diagram explains how the world is slowly getting warmer. Read the seven labels below and write them in the correct boxes.

Heat is reflected from the Earth back into the atmosphere.

So the atmosphere gets warmer and warmer.

Some heat is trapped by carbon dioxide and other greenhouse gases.

Some heat escapes into space.

The sun's rays pass through the atmosphere to the Earth's surface.

Burning fossil fuels and removing forests increases the level of carbon dioxide.

The Earth's surface gets warmer.
